

Energy Logging Surveys

The cost of energy is substantial- it is underestimated how simply changing usage patterns can contribute to huge savings. Equipped with the latest ACR data logging equipment, and software, ETTiS have the effective means of collecting and presenting data for electrical load profiling.

A portable self powered data logger is versatile and can be deployed easily without shutting down equipment. Critical parameters are recorded 24/7/365 depending on the application.

Some of the benefits of energy logging are;

- Eliminate maximum demand calculations
- Identify out of balance 3-phase circuits
- Load profiling (distribution Boards, final sub-circuits etc)
- Energy management providing cost savings
- Inexpensive
